

# Nintex Promapp integration with SharePoint.

Make process guidance available where and when teams need it – within the tools they use every day. With Nintex Promapp's one-click sharing, you can embed dynamic processes into SharePoint and intranet pages. Many of our clients embed Nintex Promapp content into SharePoint pages. The dynamic content from Nintex Promapp slots into standard web parts. You can choose what you want to embed from Nintex Promapp, and embed Nintex Promapp links into your intranet in minutes.

## 5 reasons to integrate.

**PERSONALIZATION** – Personalized dashboard indications show Nintex Promapp notifications within SharePoint.

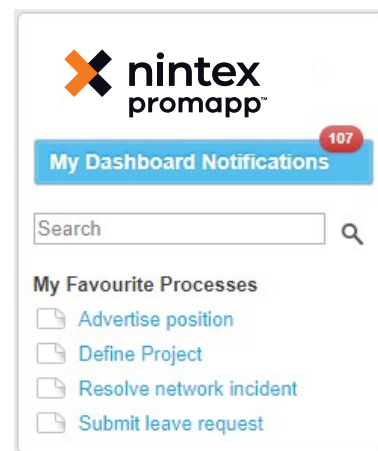

**TIME SAVING** – Full integration between Nintex Promapp and SharePoint means users don't need to open two applications to perform their work, and helps avoid errors when switching between them.

**NINTEX FORMS** – Since Microsoft's decision to discontinue InfoPath in 2016, many customers have begun switching to modern and responsive Nintex Forms. If you're still using InfoPath, contact us today before your InfoPath forms stop working.

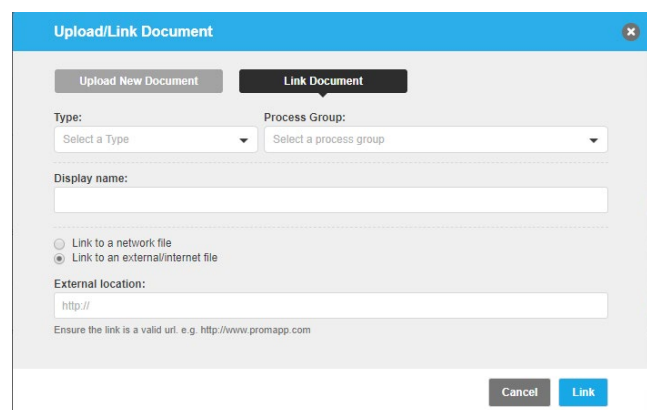

**DOCUMENT LINKAGE** – Store documents on SharePoint and then link them into your Nintex Promapp processes. If your IT policies prevent your documents being stored on third party cloud sites, this is perfect for you.

**SEARCH FUNCTION** – The federated search gives you the ability to search for processes through SharePoint and exclude other SharePoint information from your results.

**ACCESS** - By embedding processes or process groups in SharePoint, teams can access any documents or forms that are stored on SharePoint through Nintex Promapp. Nintex Promapp processes can also be accessed

Dashboard notifications web

Document integration (SharePoint to Nintex Promapp)

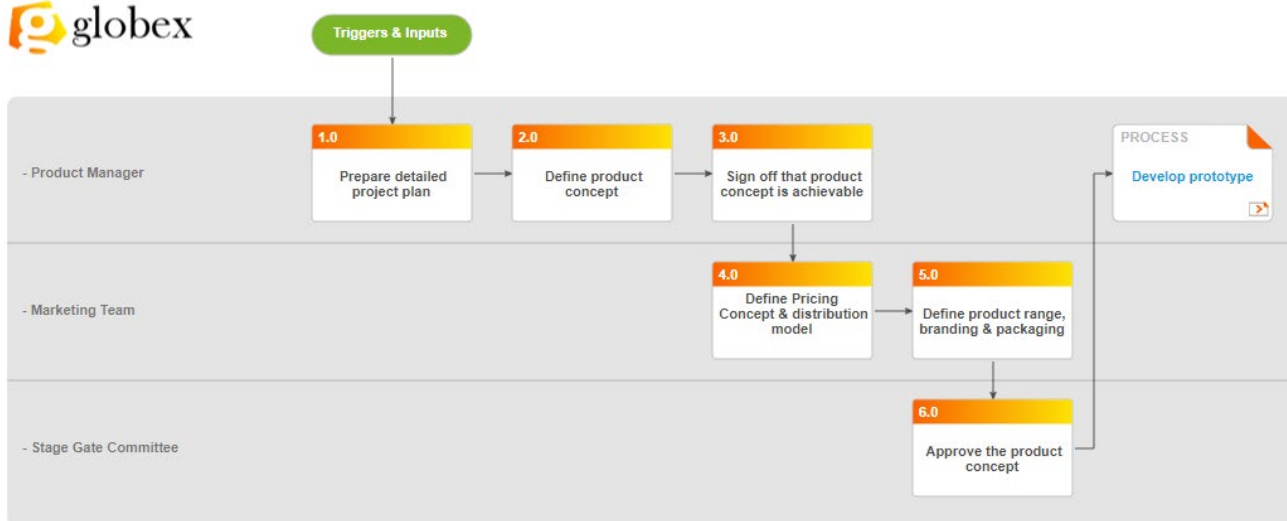

by clicking on them from SharePoint.

## Proven solution – simple implementation.

No web part customization is required for SharePoint clients, so deploying Nintex Promapp links into your intranet takes minutes. Ongoing updates are managed and fed directly from Nintex Promapp in real time.

We've built Nintex Promapp integration specifically for SharePoint:

- Dynamic process links to embed into web parts
- Dynamic process lists fed from Nintex Promapp
- Federated search capabilities with blended Nintex Promapp search results, or separate process-only search results
- Personal dashboard / login web part.

An embedded process
