

Promapp integration with SharePoint.

Make process guidance available where and when teams need it – within the tools they use every day. With Promapp's one-click sharing, you can embed dynamic processes into SharePoint and intranet pages. Many of our clients embed Promapp content into SharePoint pages. The dynamic content from Promapp slots into standard web parts. You can choose what you want to embed from Promapp, and embed Promapp links into your intranet in minutes.

5 reasons to integrate.

PERSONALIZATION – Personalized dashboard indications show Promapp notifications within SharePoint.

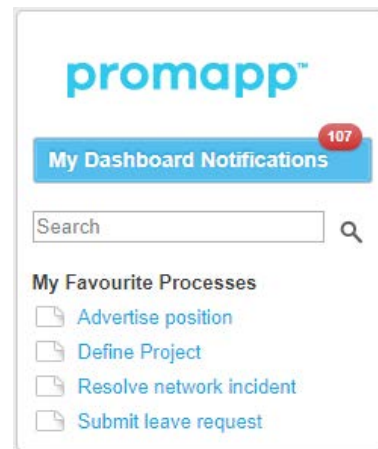

TIME SAVING – Full integration between Promapp and SharePoint means users don't need to open two applications to perform their work, and helps avoid errors when switching between them.

INFOPATH FORMS – Integration allows you easy access to InfoPath forms (which are stored on SharePoint) directly from a process. That means you can complete a form while looking at the process in Promapp.

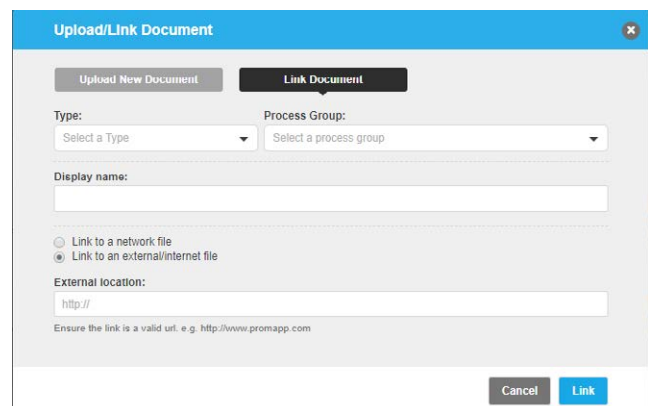

DOCUMENT LINKAGE – Store documents on SharePoint and then link them into your Promapp processes. If your IT policies prevent your documents being stored on third party cloud sites, this is perfect for you.

SEARCH FUNCTION – The federated search gives you the ability to search for processes through SharePoint and exclude other SharePoint information from your results.

ACCESS - By embedding processes or process groups in SharePoint, teams can access any documents or forms that are stored on SharePoint through Promapp. Promapp processes can also be accessed by clicking on them from SharePoint.

Dashboard notifications web

Document integration (SharePoint to Promapp)

Proven solution – simple implementation.

No web part customization is required for SharePoint clients, so deploying Promapp links into your intranet takes minutes. Ongoing updates are managed and fed directly from Promapp in real time.

We've built Promapp integration specifically for SharePoint:

- Dynamic process links to embed into web parts
- Dynamic process lists fed from Promapp
- Federated search capabilities with blended Promapp search results, or separate process-only search results
- Personal dashboard / login web part.

An embedded process
